PROFESSIONAL SUMMARY

Software Development Technologist with 3+ years of experience building web products, both in institutional settings and as a freelancer. Specialized in Frontend, without losing sight of Backend or the design process. Alongside my institutional work, I build my own SaaS product, end to end — from design to production deployment.

PROFESSIONAL EXPERIENCE

Full Stack Developer — Instituto Ismac

Tumbaco, Ecuador | August 2022 – Present

- Full-cycle development of the institutional website from scratch: requirements analysis, responsive design and layout, feature implementation, and production deployment. Domain and deployment management, SEO optimization, and ongoing maintenance.
- Contributed to modules of the institution's Academic Management System (SGA), working across both Backend and Frontend. As a key contribution, built the interactive dashboard views using React, integrating them into an existing PHP (CodeIgniter) codebase — modernizing the interface and improving data visualization for users.
- Automated the student credential generation process within the SGA. Previously, manually creating each credential in a Word template took roughly 3 to 6 minutes per student; during enrollment periods (100+ students per cycle), this amounted to at least 8 hours of operational work. Built a feature that generates and downloads the credential as a PDF with a single click, cutting issuance time by more than 80% and eliminating manual data-entry errors.
- Redesigned the SGA's Login and main dashboard views, comprehensively improving visual experience, usability, and responsive design.
- Built a custom chatbot for the institutional website from scratch, with a scalable architecture designed for future AI integrations.
- Developed a web system for tracking institutional soccer championships: match schedules, standings, registered teams, a weekly-updated gallery, and champion announcements by category.

Frontend / Full Stack Developer — Freelance

Pifo, Ecuador | January 2026 – Present

- Built a portfolio-style web application for a client focused on publishing multimedia content, featuring a custom macOS-inspired interface with transitions, dynamic background switching, and desktop-style navigation.
- Developed a corporate landing page for a software studio from scratch, aligned with the company's brand guidelines, including animations and a functional contact form that routes inquiries directly to the corporate email.
- Built a certification system for a school in Pifo that automates year-end diploma generation, letting teachers enter data through simple forms.
- Developing MoonVideo, my own SaaS product with a scalable architecture for customizing embeddable video players, integrable into WordPress, Wix, or any website via embed code. Actively in development.
- Building the frontend for a multi-platform (web and mobile) academic system: grades, real-time notifications, profile management, light/dark themes, and interactive 3D components. Stack: React, BEM-based CSS, Motion, Three.js, and react-parallax-tilt on the frontend; Node.js and Express on the backend.
- Built a PHP backend to automate receiving and managing HR-related emails, including résumé file uploads. Developed, tested, and deployed to production.

PERSONAL PROJECT

Portfolio - marcopozo.dev

Designed and built my professional portfolio from scratch with React, TypeScript, and Vite. Features bilingual support (Spanish/English), light/dark theming, a WebGL shader background, smooth scrolling (Lenis), a functional contact form (EmailJS), and a custom design system built on design tokens — no CSS frameworks. Deployed on a custom domain via Vercel, with responsive design verified from 320px up to 4K displays.

EDUCATION

Software Development Technologist — Instituto Ismac

Tumbaco, Ecuador | July 2020 – July 2022

Business technology tools workshop (Git, GitHub, Power BI).

English: A2 level.

ADDITIONAL SKILLS

- Frontend Development: HTML, CSS, JavaScript, TypeScript, React, Vite, Tailwind CSS, Bootstrap
- Backend Development: Node.js, Express, NestJS, PHP
- Databases: MySQL, PostgreSQL
- Version control tools: Git, GitHub
- Design and prototyping: Figma, Adobe XD, Photoshop
- DevOps / Infrastructure: VPS management and production application deployment
- AI: Proficient with Claude Code, Codex
